AN EXPLANATION OF THE TABLES SHEWING The Sunday Letter, Golden Number, Epact, and Moveable Feasts.

IN the Table shewing the Circle of the Sun and Dominical Letter, right against the year of our Lord, you have in the next column the circle of the Sun, the Dominical letter according to our *English* Accompt in the third column, and the Dominical letter according to the soveraign accompt in the fourth column.

Example. This present year, 1668. the circle of the Sun is 25, the *English* Letters are E D, and the *Roman* A G, the first is the Sunday letter until the 24 of

Februarij, and the other all the year after.

Note also, that when the years in this Table are expired, you may begin them again by placing 1696 in the room of 1668, and so on, and the contrary for any time past, and so the Table will be perpetual. Or the Cycle of the Sun may be Arithmetically found in this manner.

Add 9 to the year of our Lord (because our Saviour was born when the *Cycle* was 9) and divide the sum by 28 the quotient will shew how often this circle hath gone about since Christs birth, and the remainder will shew which of the 28 the present is, if nothing the *Cycle* is 28. *Example*, To the year of our Lord 1668, I add 9, and it maketh 1677, which being divided by 28, the quotient is 59, and so often hath this circle gone about, since our Saviours birth, the remainder is 25, which is the *Cycle* of the Sun for that year, as was said before.

The Table shewing the Prime or Golden Number, and Epact is in like manner divided into four columns, in the first is the year of our Lord, the Golden Number in the second, the *English* Epact in the third, and the *Roman* Epact in the fourth. Thus in the year 1668 the Golden Number is 16. The *English* Epact 26, and the *Roman* 16. When the years in this Table are expired, they may be continued as in the former example,

ample, by placing 1687 in the room of 1668, and the contrary for any time past, and so this Table also will be perpetual.

Or the Golden Number and Epact may be Arithmetically found in this manner.

To find the Golden Number, adde 1 to the year of our Lord, and divide the sum by 19, the remainder is the Golden Number. As for Example, I add one to the year 1668, and it maketh 1669, which being divided by 19, the remainder is 16, which is the Golden number as before.

To find the *English* Epact, multiply the Golden number by 11, and the product divide by 30, the remainder is the Epact. Example, In the year 1668 the Golden Number is 16, which being multiplied by 11, the product is 176, which being divided by 30 the remainder is 26, which is the Epact as before.

Having thus found the *Cycle* of the Sun, Dominical Letter, Golden Number, and Epact, you may easily find the moveable Feasts: for if you seek the *English* Epact in the first column of the Table, and your Sunday Letter that next followeth it in the second, right against your Sunday Letter is set down the moveable Feasts required. Example, In the year of our Lord 1668 the Sunday Letters are E D, and the Epact 26, this Epact 26 is the last in the Table, and the first E that followeth it, is in the second

line; which sheweth that *Ashwednesday* is *Feb.* 5. and because that Letter serveth for no longer time than the 24 of *February*, therefore the letter D must give me the other Feasts, which is the Letter above it, and so I find *March* the 22. to be *Easter-day*, *April* 30. *Ascension-day*, *May* 10. *Whitsunday*, &c.

In like manner the Epact in the Forraign account is 1633 the Sunday Letters A G, which being sought in the two last columns of this Table, according to the former directions, I find *Feb.* 22. to be *Ashwednesday*, *April* 2. *Easter day*, *May* the 17 *Ascension day*, &c.

A Table

A Table shewing the Moveable Feasts in both Accounts.

THE POSTSCRIPT TO *The Scale of Intereſt:* OR, *A Direction for the Deans and Chapters in Cathedrals, for the Heads and Fellows of Colledges in both Univerſities, in their letting of Leaſes, and taking of Fines.*

Since this Treatiſe was Printed, I had this Queſtion propounded to me:

If One pound be given to renew 7 years after 14, what ſhall be given for 4 years after 17.

The which Queſtion, with others of the like nature, Cathedral Churches and Colledges, have frequent occaſion to reſolve, but I know no Tables extant to that purpoſe: In this Treatiſe, theſe Queſtions may be indeed reſolved, by the Table ſhewing the preſent worth of Annuities at

10 several rates of Interest, but not without some trouble; for the rates of Interest in that Table, do not exactly fit the rate of Interest suteable to the Question, as by inspection may easily be discerned; 11 pound *per Cent. per Annum* is too little, and 12 *per Cent.* too much, and by taking the part proportional, I found the rate of Interest suteable to the Question to be 11 Pounds, 11 Shillings, 8 Pence Farthing, and 3 tenths of a Farthing. And so much do the Tenants of Cathedal Churches and Colledges make of their Money, in the aforesaid proportion of renewing their Leases.

And therefore to make this Treatise as serviceable as I could to all mens occasions, I have here Annexed a short Table suteable to this rate of Interest, for the just proportioning of the fines in the renewing of Leases for any time under 21 years, which is the utmost extent of time for which such Leases are now made, Leases for Lives and Houses excepted.

And this Table doth consist of two parts, the first sheweth the present worth of One Pound for any number of years under 22, and is to be used as the other Tables of that nature in this Treatise.

Example. Let the present worth of 53 pounds *per Annum* for 13 years be required. The present worth of 1*l.* for that time is 6.55907, which being

A TABLE shewing the present worth of Annuities at 11 pound, 11 shillings, 8 pence farthing, and 3 tenths of a farthing *per Cent. per Annum.*

Being the Rate of Interest allowed to Tenants in their Leases of Lands, which they hold from Cathedral Churches and Colledges.

I. Part.	What is the present worth of 1 year after 20	II. Part
1	.90034	0.10052

2	1.69938	of	2	years after	19	0.21264
3	2.41922		3		18	0.33770
4	3.06438		4		17	0.47720
5	3.64262		5		16	0.63281
6	4.16088		6		15	0.80639
7	4.62540	of	7	years after	14	1.00000
8	5.04176		8		13	1.21600
9	5.41496		9		12	1.45688
10	5.74948		10		11	1.72573
11	6.04934		11		10	2.02559
12	6.31819	of	12	years after	9	2.36011
13	6.55907		13		8	2.73331
14	6.77507		14		7	3.14967
15	6.96868		15		6	3.61419
16	7.14226		16		5	4.13245
17	7.29786	of	17	years after	4	4.71069
18	7.43737		18		3	5.35588
19	7.56243		19		2	6.07188
20	7.67455		20		1	6.87473
21	7.77507					

...plyed by 53, the product is 343.63071, and therefore the present worth of 53 pounds *per annum* for 13 years to come is 343 pounds, 12 shillings, 7 pence farthing, the like may be done for any other.

The second part of this Table sheweth the present worth of one pound Annuity for any number of years expired under 21, as in the Question propounded to me, when 7 years in such a Lease are expired, what fine shall be paid to renew such a Lease for 7 years; that is, what shall be paid to make the 14 years remaining in that Lease 21 years again; or, what is 7 years worth after 14. By this Table

The present worth of 21 years is,	7. 77507
The present worth of 14 years is,	6. 77507
And their difference One pound,	1. 00000

...the present worth of one pound Annuity for ...ears after 14. But to save this labour, the se...d part of this Table doth resove this and all ...er Questions of the like nature, by inspection ...ly.

...hus the present worth of 9 years after 12, ...5688; that is, 11*l*. 9*s*. 1*d*.

...he present worth of One pound Annuity ... after 17 is, 0.47720, which being re... The like may be done for
